

Metal Fabrication | Industrial Ventilation

STRUCTURAL STEEL

One of IVI, Inc.'s goals is to provide its customers with solutions down to the last detail, including the structural steel required for most large-scale industrial ventilation and material handling projects. That's why our teams can complete engineering, design, fabrication and installation services for all structural aspects of projects. Each year we install hundreds of tons of structural steel solutions and thousands of square feet of platforms and catwalks.

IVI has professional engineering registration in many states across the United States, allowing our team to provide full structural support for all of its products, nationwide.
